Sand Content Kit ZI 1032

Standards:ASTM D 4381

Specification:

The Sand Content Kit is an easy and reliable tool for determining the sand content of drilling fluid. The primary functions of a drilling fluid is to carry drilled solids contaminants from the well bore. Sand Content Kit is used to determines the volume percent of sand-sized particles (any material larger than 74 μm (200-mesh) in size) in the drilling fluid. The test can be performed both on low solids fluids as well as on weighted fluids. This sand content kit consists of a glass tube graduated to read percent (%) by volume, a funnel, and a 200-mesh sieve contained in a cylindrical shaped holder. Complete Sand Content Kit package includes sand content kit, complete, with sieve, funnel, graduated tube, wash bottle, instruction manual and carrying case.
