## Sand Density Cone Apparatus

ZI 3035

Standards:
Specification:

Used to determine the in-situ density of fine grained compacted soil. The test consist in digging a hole into the ground and then collect, dry and weight the sampled soil. The hole is then filled with dry sand from the cone container. The apparatus consist of a double metal cone, one plastic 5 Its jar \& a metal tray with centre hole. Size of the cone is $61 / 2^{\prime \prime}(165.1 \mathrm{~mm})$
Note:
On request 12" (305 mm) Sand Density Cone Apparatus is also supplied at an extra cost.
